All the Keller Shells we are stocking are being made with the new VSS "Vibrating Sound Source" process. VSS is a Keller Product patent-pending innovation that enhances the integrity and strength of the drum shell. The process conditions each VSS shell resulting in regenerated vibrations that elevate head response and increases drum performance. The VSS process also gives more integrity to the bearing edge, decreases tear outs when drilling lug holes, and helps eliminate the delaminating of interior plies which can occur in other plywood shells.

Keller Products has introduced 4 new product lines sure to pack a pleasant punch to the percussion industry. The new Maple VSS, Birch VSS, Same Species Snares VSS in Curly Maple, Figured Cherry or Red Oak, and the Vintage VSS Shells made with Mahogany or Maple faces and Poplar cores round out the new offerings. You can purchase half the length of a drum listed for half the price. Other lengths will be charged for either the whole shell or half, whichever is the best yield for the length you need. Bass shells are manufactured at 24" length only. No charge for cutting.

You now have available for immediate shipment the most extensive line of musical drum shells in the U.S. for your custom or production drum manufacturing. We are now stocking, in all the popular diameters and ply counts, Keller's new VSS Vintage Series, VSS Maple Series and the VSS Birch Series of shells. These, along with the carbon fiber Rocket Shells, Same Species Snares and the birch or maple bass hoops, allow us to fill all your drum shell requirements whether they are for hard rock, marching, studio work or jazz.

We are striving to be your one stop shell source.

Keller drum shells and hoops are known throughout the music industry for their outstanding construction and sound quality. Keller shells are used by leading drum manufacturers and custom builders throughout the world. Our large inventory allows you to have the shells shipped via U.P.S. the same day for most orders. For orders under \$200.00 that ship UPS we will charge a wrap, handling fee of \$10.00 per order. **All shells and hoops are guaranteed to your satisfaction or we will replace or give a full refund.**

DISCOUNT OF 15% FOR 6 OR MORE SHELLS

BEARING EDGES**SNARE BEDS**RE-INFORCEMENT HOOPS

The drum shells are raw with no bearing edges or holes drilled. Anderson International can precisely cut bearing edges on all size shells. We offer vintage style edges, the common 45-degree edge, either center or offset. The cost on this service is \$15.00 an end for snares and toms, \$20.00 an end for bass drums. We can hand cut and finish snare beds for all size snare drums, \$15.00. Each variety of edge can alter the final drum sound slightly. Reinforcement hoops can also be applied on the inside of snares and toms for \$40.00 top and bottom and for bass drums, \$50.00 top and bottom. We use a 6 ply 3/4" deep hoop for toms and snares and a 6 ply 1 1/4" hoop for bass drums. The bearing edge is the most important part of the drum shell with regards to tone and overall performance. If you are a first time builder we encourage you to utilize our services to achieve the maximum acoustical quality out of each shell.

The thicknesses of the various ply configurations on the shells are:

5 ply approx. 0.130" or 3.3 mm thick
8 ply approx. 0.210" or 5.3 mm thick
15 ply approx. 0.400" or 10.1 mm thick

6 ply approx. 0.155" or 3.9 mm thick
10 ply approx. 0.270" or 6.8 mm thick

In general, a thinner wall thickness (5 ply) gives the drum sound more decay while a thicker wall (10 ply) has more attack.

CARBON FIBER ROCKET SHELLS

We are now distributing the line of Rocket Shells. Page 7 of this stock/price list details the sizes and gives further information on these high quality drum shells.

VINTAGE SHELLS

MAHOGANY / MAPLE FACES WITH POPLAR CORES AND VSS (VIBRATION SOUND SOURCE)

These shells have the new VSS technology which enhances the integrity and strength of the drum. They are manufactured with mahogany or maple faces and a poplar core for the classic vintage sound and look. The mahogany with poplar core series incorporates a 6 ply shell with 1 1/2" wide maple reinforcement rings for snares, toms, and floor toms, while the bass drums have 2" wide rings installed. The maple with poplar cores come with 1 1/4" and 1 3/4" wide rings.

SAME SPECIES SNARES

INCORPORATING THE NEW VSS (VIBRATION SOUND SOURCE) FEATURING CURLY MAPLE, FIGURED CHERRY AND RED OAK

These shells have the new VSS technology which enhances the integrity and strength of the drum. Composed of one type of wood from the front of the shell to the back, the Same Species Snares are designed for tonal deviation. Each of our three toned woods contains an inherent timbre that generates a different sound: **Curly Maple** crisp and warm, **Oak** chunky and articulate with a lower pitch timbre; a darker alternative to maple, **Cherry** robust; a brighter alternative to maple. These snares are available in a 14" diameter, 5 1/2" or 6 1/2" tall 10 ply and have 1 1/4" wide 10 ply reinforcement rings installed.

ROCKET SHELLS

"GUARANTEED FOR LIFE"

We are now distributing Rocket Shells. Every carbon fiber Rocket Shell is made by hand to precise computer-aided design standards. The patented high density core design combined with the carbon fiber make these shells unbelievably strong, light weight and essentially indestructible. These carbon fiber shells provide excellent sound and superior quality. The bearing edges are machined to 45 degrees with a 3/8" roundover. The shells are .225 inches thick. All shells are guaranteed not to warp, crack, delaminate or otherwise fail to operate under normal use. **Many other heights are available, ask for a quote.** The shells are stocked in the translucent black finish. However, a wide range of colors and customized designs can be obtained.
